

# Refrigerant log sheet

General service record. One appliance per sheet. Write actual measured amounts and keep supporting records.

Owner / operator:

Service address:

Unit ID / location:

Make / model / serial:

| Date | Technician | Refrigerant | Added (lb) | Recovered (lb) | Work order | Reason / supporting record reference |
|------|------------|-------------|------------|----------------|------------|--------------------------------------|
|      |            |             |            |                |            |                                      |
|      |            |             |            |                |            |                                      |
|      |            |             |            |                |            |                                      |
|      |            |             |            |                |            |                                      |
|      |            |             |            |                |            |                                      |

Use decimal pounds: 1 lb 8 oz = 1.5 lb. Keep added and recovered amounts separate. Zero means none; mark an unknown quantity explicitly. Attach test results, invoices and other required records. This sheet is not an EPA-issued form and is not a complete compliance record.
